OFFICE OF INSPECTOR GENERAL

Office of Healthcare Inspections

VETERANS HEALTH ADMINISTRATION

Comprehensive Healthcare
Inspection Program Review
of the VA Puget Sound
Health Care System

Seattle, Washington

OIG MISSION

To serve veterans and the public by conducting effective oversight of the programs and operations of the Department of Veterans Affairs (VA) through independent audits, inspections, and investigations.

In addition to general privacy laws that govern release of medical information, disclosure of certain veteran health or other private information may be prohibited by various federal statutes including, but not limited to, 38 U.S.C. §§ 5701, 5705, and 7332, absent an exemption or other specified circumstances. As mandated by law, the OIG adheres to privacy and confidentiality laws and regulations protecting veteran health or other private information in this report.

**Report suspected wrongdoing in VA programs and operations

Report Overview

This Comprehensive Healthcare Inspection Program (CHIP) review provides a focused evaluation of the quality of care delivered in the inpatient and outpatient settings of the VA Puget Sound Health Care System (the Facility). The review covers key clinical and administrative processes that are associated with promoting quality care.

CHIP reviews are one element of the Office of Inspector General's (OIG) overall efforts to ensure that our nation's veterans receive high-quality and timely VA healthcare services. The reviews are performed approximately every three years for each facility. The OIG selects and evaluates specific areas of focus on a rotating basis each year.

The OIG's current areas of focus are

1. Leadership and Organizational Risks;
2. Quality, Safety, and Value;
3. Credentialing and Privileging;
4. Environment of Care;
5. Medication Management;
6. Mental Health Care;
7. Long-Term Care;
8. Women's Health; and
9. High-Risk Processes.

This review was conducted during an unannounced visit made during the week of January 8, 2018. The OIG conducted interviews and reviewed clinical and administrative processes related to areas of focus that affect patient care outcomes. Although the OIG reviewed a spectrum of clinical and administrative processes, the sheer complexity of VA medical centers limits the ability to assess all areas of clinical risk. The findings presented in this report are a snapshot of Facility performance within the identified focus areas at the time of the OIG visit. Although it is difficult to quantify the risk of patient harm, the findings in this report may help facilities identify areas of vulnerability or conditions that, if properly addressed, could improve patient safety and healthcare quality.

Results and Review Impact

Leadership and Organizational Risks

At the Facility, the leadership team consists of the Director, Chief of Staff, Deputy Director for Patient Care Services (AD-PCS), Deputy Director, and Acting Assistant Director. Organizational communication and accountability are carried out through a committee reporting structure with the Executive Leadership Council having oversight for leadership groups such as the Process Improvement, Clinical Executive, Staff and Organizational Development, and Strategic Management and Resources Boards. The executive leaders are members of the Executive Leadership Council through which they track, trend, and monitor quality of care and patient outcomes. The Director serves as the Chairperson with the authority and responsibility to establish policy, maintain quality of care standards, and perform organizational management and strategic planning. The Process Improvement Board, co-chaired by the Director, is responsible for tracking, trending, and monitoring quality of care and patient outcomes.

Except for the Acting Assistant Director position, which had been vacant since August 2017, the OIG noted that the executive leaders had been working together as a team since October 2017. In the review of selected employee and patient survey results regarding Facility senior leadership, the OIG noted employees appear generally satisfied with the leadership, while opportunities appear to exist to improve outpatient experiences.

The OIG recognizes that the Strategic Analytics for Improvement and Learning (SAIL) model has limitations for identifying all areas of clinical risk but is “a way to understand the similarities and differences between the top and bottom performers” within the Veterans Health Administration (VHA).¹ The senior leadership team was knowledgeable about selected SAIL metrics and should continue to take actions to improve performance of the Quality of Care and Efficiency metrics likely contributing to the current “2-Star” rating.

Additionally, the OIG reviewed accreditation agency findings, sentinel events, disclosures of adverse patient events, and Patient Safety Indicator data, and did not identify any substantial organizational risk factors.

Of the eight areas of clinical operations reviewed, the OIG noted findings in two and issued five recommendations that are attributable to the Director, Chief of Staff, Deputy Director, and Assistant Director. These are briefly described below.

¹ VHA’s Office of Operational Analytics and Reporting developed a model for understanding a facility’s performance in relation to nine quality domains and one efficiency domain. The domains within SAIL are made up of multiple composite measures, and the resulting scores permit comparison of facilities within a Veterans Integrated Service Network or across VHA. The SAIL model uses a “star” rating system to designate a facility’s performance in individual measures, domains, and overall quality.

Environment of Care

The OIG generally noted a safe environment of care. However, the OIG identified deficiencies with attendance on environment of care rounds, inspection of medical equipment, discussion of construction activities in the Infection Prevention Committee minutes, and dry storage room temperature monitoring in Nutrition/Food service areas.

Medication Management

The OIG found general compliance with many of the performance indicators reviewed, such as monthly and quarterly reports, ordering/procurement process, and program coordinators and inspectors having no conflicts of interest and completing required training. However, the OIG identified deficiencies with the reconciliation and return of stock requirements during inspections of patient care areas.

Summary

In the review of key care processes, the OIG issued five recommendations that are attributable to the Director, Chief of Staff, Deputy Director, and Assistant Director. The number of recommendations should not be used as a gauge for the overall quality provided at this Facility. The intent is for Facility leaders to use these recommendations as a road map to help improve operations and clinical care. The recommendations address systems issues as well as other less-critical findings that, if left unattended, may eventually interfere with the delivery of quality health care.

Comments

The Veterans Integrated Service Network Director and Facility Director agreed with the CHIP review findings and recommendations and provided acceptable improvement plans. (See Appendixes E and F, pages 51–52, and the responses within the body of the report for the full text of the Directors' comments.) The OIG will follow up on the planned actions until they are completed.

Purpose and Scope

Purpose

This Comprehensive Healthcare Inspection Program (CHIP) review was conducted to provide a focused evaluation of the quality of care delivered in the VA Puget Sound Health Care System's (the Facility) inpatient and outpatient settings through a broad overview of key clinical and administrative processes that are associated with quality care and positive patient outcomes. The purpose of the review was to provide oversight of healthcare services to veterans and to share findings with Facility leaders so that informed decisions can be made to improve care.

Scope

Good leadership makes a difference in managing organizational risks by establishing goals, strategies, and priorities to improve care; setting the quality agenda; and promoting a quality improvement culture to sustain positive change.^{2,3} Investment in a culture of safety and quality improvement with robust communication and leadership is more likely to result in positive patient outcomes in healthcare organizations.⁴ As noted in Figure 2 on page 2, leadership and organizational risks can positively or negatively affect processes used to deliver care to veterans.

To examine risks to patients and the organization when these processes are not performed well, the OIG focused on the following nine areas of clinical care and administrative operations that support quality care—Leadership and Organizational Risks; Quality, Safety, and Value (QSV); Credentialing and Privileging; Environment of Care (EOC); Medication Management; Controlled Substances (CS) Inspection Program; Mental Health: Post-Traumatic Stress Disorder (PTSD) Care; Long-Term Care: Geriatric Evaluations; Women's Health: Mammography Results and Follow-up; and High-Risk Processes: Central Line-Associated Bloodstream Infections (CLABSI) (see Figure 2).⁵

Review of Healthcare Operations and Services**

Source: VA OIG

Additionally, OIG staff provided crime awareness briefings to increase Facility employees' understanding of the potential for VA program fraud and the requirement to report suspected criminal activity to the OIG.

Methodology

To determine compliance with the Veterans Health Administration (VHA) requirements related to patient care quality, clinical functions, and the EOC, the OIG physically inspected selected areas; reviewed clinical records, administrative and performance measure data, and accreditation survey reports;⁶ and discussed processes and validated findings with managers and employees. The OIG interviewed applicable managers and members of the executive leadership team.

The review covered operations for January 25, 2015,⁷ through January 8, 2018, the date when an unannounced week-long site visit commenced. On February 1 and 15, 2018, the OIG presented crime awareness briefings to 75 of the Facility's 4,486 employees. These briefings covered procedures for reporting suspected criminal activity to the OIG and included case-specific examples illustrating procurement fraud, conflicts of interest, and bribery.

This report's recommendations for improvement target problems that can impact the quality of patient care significantly enough to warrant OIG follow-up until the Facility completes corrective actions. The Facility Director's comments submitted in response to the recommendations in this report appear within each topic area.

While on site, the OIG did not receive any concerns beyond the scope of the CHIP review. The OIG conducted the inspection in accordance with OIG standard operating procedures for CHIP reviews and *Quality Standards for Inspection and Evaluation* published by the Council of the Inspectors General on Integrity and Efficiency.

⁶ The OIG did not review VHA's internal survey results but focused on OIG inspections and external surveys that affect Facility accreditation status.

⁷ This is the date of the last Combined Assessment Program and/or Community Based Outpatient Clinic and Other Outpatient Clinic reviews.

Results and Recommendations

Leadership and Organizational Risks

Stable and effective leadership is critical to improving care and sustaining meaningful change. Leadership and organizational risks can impact the Facility's ability to provide care in all of the selected clinical areas of focus.⁸ To assess the Facility's risks, the OIG considered the following organizational elements

1. Executive leadership stability and engagement,
2. Employee satisfaction and patient experience,
3. Accreditation/for-cause surveys and oversight inspections,
4. Indicators for possible lapses in care, and
5. VHA performance data.

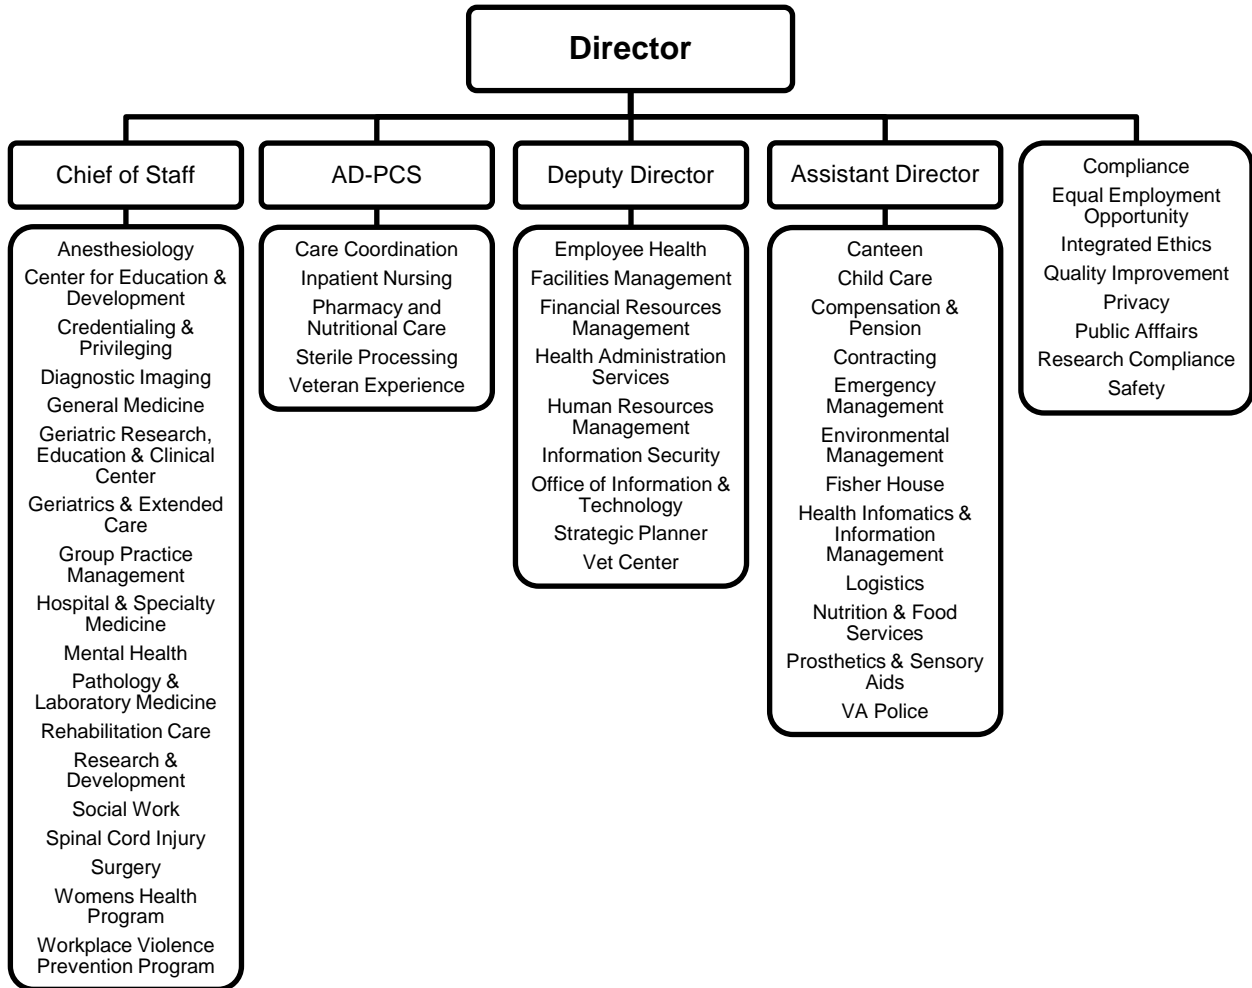

Executive Leadership Stability and Engagement

Because each VA facility organizes its leadership to address the needs and expectations of the local veteran population that it serves, organizational charts may differ among facilities. Figure 3 illustrates the Facility's reported organizational structure. The Facility has a leadership team consisting of the Director, Chief of Staff, Deputy Director for Patient Care Services (AD-PCS), Deputy Director, and Acting Assistant Director. The Chief of Staff and AD-PCS are responsible for overseeing patient care and service and program chiefs.

It is important to note that the Acting Assistant Director was not permanently assigned to that position and had been in that role since August 29, 2017. With that one exception, the executive leaders had been working together as a team since October 2017.

Figure 3. Facility Organizational Chart

Source: VA Puget Sound Health Care System (received January 8, 2018)

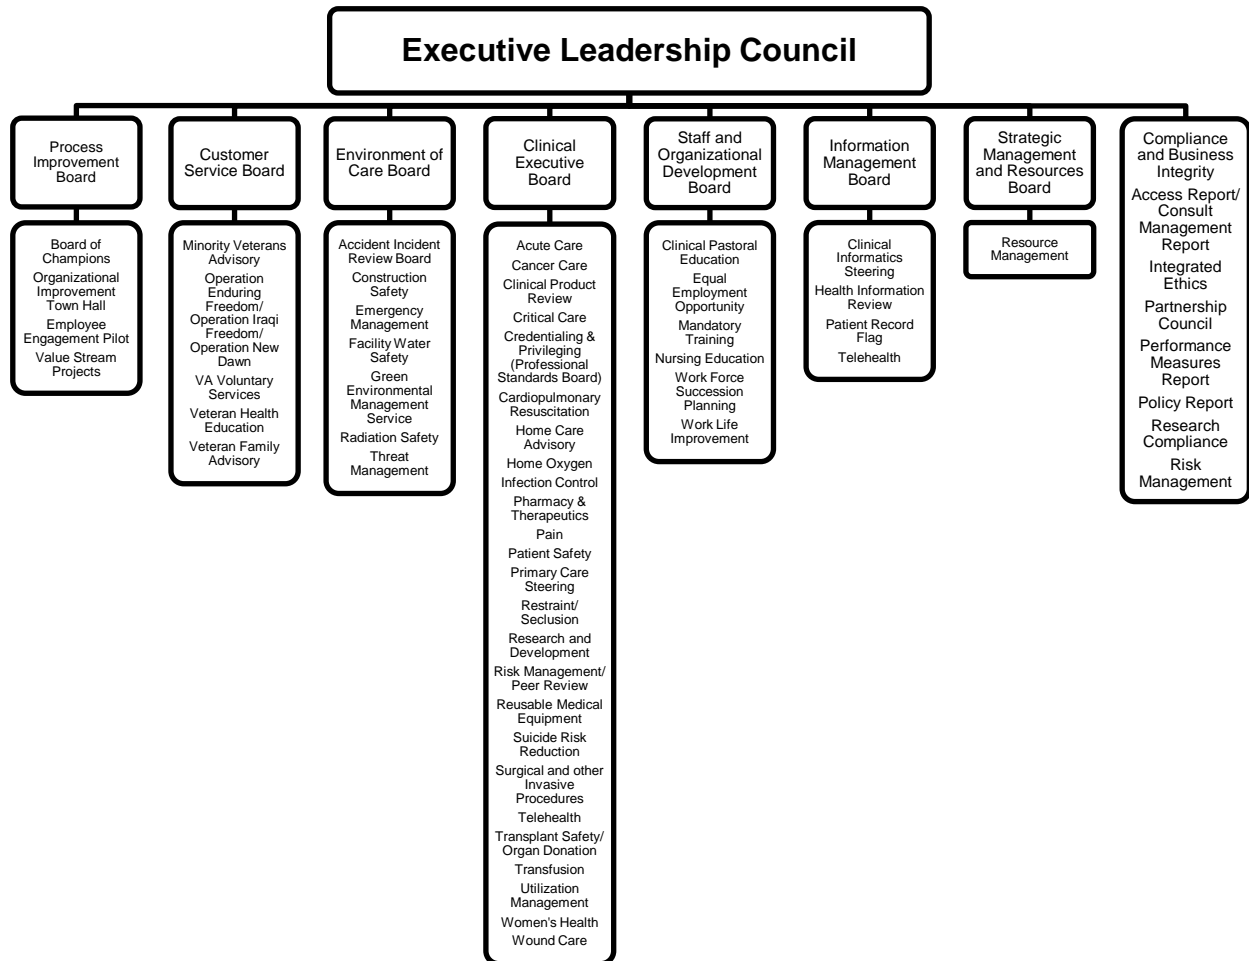

To help assess engagement of Facility executive leadership, the OIG interviewed the Director, Deputy Director, Chief of Staff, and AD-PCS regarding their knowledge of various performance metrics and their involvement and support of actions to improve or sustain performance.

In individual interviews, these executive leaders generally were able to speak knowledgeably about actions taken during the previous 12 months in order to maintain or improve performance, employee and patient survey results, and selected Strategic Analytics for Improvement and Learning (SAIL) metrics. These are discussed more fully below.

The leaders are also engaged in monitoring patient safety and care through formal mechanisms. Organizational communication and accountability are carried out through a committee reporting structure with the Executive Leadership Council having oversight for leadership boards such as the Process Improvement, Clinical Executive, Staff and Organizational Development, and

Strategic Management and Resources Boards. The executive leaders are members of the Facility’s Executive Leadership Council. The Director serves as the Chairperson with the authority and responsibility to establish policy, maintain quality care standards, and perform organizational management and strategic planning. The Process Improvement Board, co-chaired by the Director, is responsible for tracking, trending, and monitoring quality of care and patient outcomes. See Figure 4.

Figure 4. Facility Committee Reporting Structure

Source: VA Puget Sound Health Care System (received January 8, 2018)

Employee Satisfaction and Patient Experience

The All Employee Survey is an annual, voluntary, census survey of VA workforce experiences. The data are anonymous and confidential. Since 2001, the instrument has been refined at several points in response to VA leadership inquiries on VA culture and organizational health. To assess employee and patient attitudes toward Facility leaders, the OIG reviewed employee satisfaction

survey results that relate to the period of October 1, 2016, through September 30, 2017, and patient experience survey results that relate to the period of October 1, 2016, through August 31, 2017.

Although the OIG recognizes that employee satisfaction survey data are subjective, they can be a starting point for discussions, indicate areas for further inquiry, and be considered along with other information on Facility leadership. Tables 1 and 2 provide relevant survey results for VHA and the Facility. As Table 1 indicates, the Facility’s results (Facility average) were similar to the VHA average, while the results for the Director’s Office (Director’s Office average) were markedly higher than the Facility and VHA averages.⁹

**Table 1. Survey Results on Employee Attitudes toward Facility Leadership
(October 1, 2016, through September 30, 2017)**

Questions/Survey Items	Scoring	VHA Average	Facility Average	Director’s Office Average ¹⁰
All Employee Survey Q59. <i>How satisfied are you with the job being done by the executive leadership where you work?</i>	1 (Very Dissatisfied)–5 (Very Satisfied)	3.3	3.3	4.4
All Employee Survey: <i>Servant Leader Index Composite</i>	0–100 where HIGHER scores are more favorable	67.7	68.1	72.5

Source: VA All Employee Survey (accessed December 8, 2017)

VHA’s Patient Experiences Survey Reports provide results from surveys administered by the Survey of Healthcare Experience of Patients (SHEP) program. VHA utilizes industry standard surveys from the Consumer Assessment of Healthcare Providers and Systems program to evaluate patients’ experiences of their health care and to support the goal of benchmarking its performance against the private sector.

VHA collects SHEP survey data from Patient-Centered Medical Home, Specialty Care, and Inpatient Surveys. From these, the OIG selected four survey items that reflect patient attitudes towards Facility leaders. For this Facility, two of the selected patient survey results related to outpatient experiences reflected lower ratings compared to the VHA average. In all, employees appear generally satisfied with the leadership, while opportunities exist to improve outpatient experiences.

⁹ The OIG makes no comment on the adequacy of the VHA average for each selected survey element. The VHA average is used for comparison purposes only.

¹⁰ Rating is based on responses by employees who report to or aligned under the Director.

**Table 2. Survey Results on Patient Attitudes toward Facility Leadership
(October 1, 2016, through August 31, 2017)**

Questions	Scoring	VHA Average	Facility Average
Survey of Healthcare Experiences of Patients (inpatient): <i>Would you recommend this hospital to your friends and family?</i>	The response average is the percent of “Definitely Yes” responses.	66.8	67.1
Survey of Healthcare Experiences of Patients (inpatient): <i>I felt like a valued customer.</i>	The response average is the percent of “Agree” and “Strongly Agree” responses.	83.4	83.3
Survey of Healthcare Experiences of Patients (outpatient Patient-Centered Medical Home): <i>I felt like a valued customer.</i>	The response average is the percent of “Agree” and “Strongly Agree” responses.	74.8	71.0
Survey of Healthcare Experiences of Patients (outpatient specialty care): <i>I felt like a valued customer.</i>	The response average is the percent of “Agree” and “Strongly Agree” responses.	75.1	72.1

Accreditation/For-Cause Surveys¹¹ and Oversight Inspections

To further assess Leadership and Organizational Risks, the OIG reviewed recommendations from previous inspections by oversight and accrediting agencies to gauge how well leaders respond to identified problems. Table 3 summarizes the relevant Facility inspections most recently performed by the OIG and The Joint Commission (TJC). Indicative of effective leadership, the Facility has closed all recommendations for improvement as listed in Table 3.¹²

¹¹ The Joint Commission (TJC) conducts for-cause unannounced surveys in response to serious incidents relating to the health and/or safety of patients or staff or reported complaints. The outcomes of these types of activities may affect the current accreditation status of an organization.

¹² A closed status indicates that the Facility has implemented corrective actions and improvements to address findings and recommendations, not by self-certification, but as determined by accreditation organization or inspecting agency.

The OIG also noted the Facility’s current accreditation status with the Commission on Accreditation of Rehabilitation Facilities¹³ and College of American Pathologists,¹⁴ which demonstrates the Facility leaders’ commitment to quality care and services. Additionally, the Long Term Care Institute conducted an inspection of the Facility’s Community Living Center.¹⁵

Table 3. Office of Inspector General Inspections/Joint Commission Survey

Accreditation or Inspecting Agency	Date of Visit	Number of Findings	Number of Recommendations Remaining Open
OIG (Combined Assessment Program Review of the VA Puget Sound Health Care System, Seattle, Washington, April 9, 2015)	January 2015	24	0
OIG (Review of Community Based Outpatient Clinics and Other Outpatient Clinics of VA Puget Sound Health Care System, Seattle, Washington, May 15, 2015)	March 2015	7	0
TJC ¹⁶	October 2016		
• Hospital Accreditation		22	0
• Behavioral Health Care Accreditation		3	0
• Home Care Accreditation		2	0

Sources: OIG and TJC (Inspection/survey results verified with the Director on January 9, 2018)

Indicators for Possible Lapses in Care

Within the healthcare field, the primary organizational risk is the potential for patient harm. Many factors impact the risk for patient harm within a system, including unsafe environmental conditions, sterile processing deficiencies, and infection control practices. Leaders must be able to understand and implement plans to minimize patient risk through consistent and reliable data and reporting mechanisms. Table 4 summarizes key indicators of risk since the OIG’s previous

¹³ The Commission on Accreditation of Rehabilitation Facilities provides an international, independent, peer review system of accreditation that is widely recognized by Federal agencies. VHA’s commitment is supported through a system-wide, long-term joint collaboration with the Commission on Accreditation of Rehabilitation Facilities to achieve and maintain national accreditation for all appropriate VHA rehabilitation programs.

¹⁴ For 70 years, the College of American Pathologists has fostered excellence in laboratories and advanced the practice of pathology and laboratory science. In accordance with VHA Handbook 1106.01, VHA laboratories must meet the requirements of the College of American Pathologists.

¹⁵ Since 1999, the Long Term Care Institute has been to over 3,500 healthcare facilities conducting quality reviews and external regulatory surveys. The Long Term Care Institute is a leading organization focused on long-term care quality and performance improvement; compliance program development; and review in long-term care, hospice, and other residential care settings.

¹⁶ TJC is an internationally accepted external validation that an organization has systems and processes in place to provide safe and quality oriented health care. TJC has been accrediting VHA facilities for more than 30 years. Compliance with TJC standards facilitates risk reduction and performance improvement.

January 2015 Combined Assessment Program and Community Based Outpatient Clinic (CBOC) and Other Outpatient Clinics review inspections through the week of January 8, 2018.¹⁷

**Table 4. Summary of Selected Organizational Risk Factors
 (January 2015 to January 8, 2018)**

Factor	Number of Occurrences
Sentinel Events ¹⁸	1
Institutional Disclosures ¹⁹	5
Large-Scale Disclosures ²⁰	0

Source: VA Puget Sound Health Care System’s Patient Safety Manager (received January 8, 2018)

The OIG also reviewed Patient Safety Indicators developed by the Agency for Healthcare Research and Quality within the U.S. Department of Health and Human Services. These provide information on potential in-hospital complications and adverse events following surgeries and procedures.²¹ The rates presented are specifically applicable for this Facility, and lower rates indicate lower risks. Table 5 summarizes Patient Safety Indicator data from October 1, 2015, through September 30, 2017.

¹⁷ It is difficult to quantify an acceptable number of occurrences because one occurrence is one too many. Efforts should focus on prevention. Sentinel events and those that lead to disclosure can occur in either inpatient or outpatient settings and should be viewed within the context of the complexity of the Facility. (Note that the VA Puget Sound Health Care System is a highest complexity (1a) affiliated Facility as described in Appendix B.)

¹⁸ A sentinel event is an incident or condition that results in patient death, permanent harm, severe temporary harm, or intervention required to sustain life.

¹⁹ Institutional disclosure of adverse events (sometimes referred to as “administrative disclosure”) is a formal process by which facility leaders together with clinicians and others, as appropriate, inform the patient or his or her personal representative that an adverse event has occurred during the course of care that resulted in, or is reasonably expected to result in, death or serious injury, and provide specific information about the patient’s rights and recourse.

²⁰ Large-scale disclosure of adverse events (sometimes referred to as “notification”) is a formal process by which VHA officials assist with coordinating the notification to multiple patients (or their personal representatives) that they may have been affected by an adverse event resulting from a systems issue.

²¹ Agency for Healthcare Research and Quality website. <https://www.qualityindicators.ahrq.gov/>. (Website accessed on March 8, 2017.)

**Table 5. Patient Safety Indicator Data
(October 1, 2015, through September 30, 2017)**

Measure	Reported Rate per 1,000 Hospital Discharges		
	VHA	VISN 20	Facility
Pressure ulcers	0.60	0.56	0.66
Death among surgical inpatients with serious treatable conditions	100.97	77.84	47.62
Iatrogenic pneumothorax	0.19	0.30	0.18
Central venous catheter-related bloodstream infection	0.15	0.07	0.32
In-hospital fall with hip fracture	0.08	0.09	0.00
Perioperative hemorrhage or hematoma	1.94	1.95	1.60
Postoperative acute kidney injury requiring dialysis	0.88	0.20	0.00
Postoperative respiratory failure	5.55	3.75	3.21
Perioperative pulmonary embolism or deep vein thrombosis	3.29	2.12	1.55
Postoperative sepsis	4.00	2.23	2.30
Postoperative wound dehiscence	0.52	1.97	0.00
Unrecognized abdominopelvic accidental puncture/laceration	0.53	0.59	0.00

Source: VHA Support Service Center

Note: The OIG did not assess VA's data for accuracy or completeness.

The Patient Safety Indicator measure for pressure ulcers shows an observed rate in excess of the observed rates for Veterans Integrated Service Network (VISN) 20 and VHA. Although the numerator for this measure is small, the Facility reported taking actions to increase nursing staff awareness and knowledge of pressure ulcer prevention and management. The Patient Safety Indicator measure for central venous catheter-related bloodstream infection also shows an observed rate in excess of the observed rates for VISN 20 and VHA. Although the numerator for this measure is small, the Facility reported implementing daily patient observations to ensure precautions are taken to prevent infection.

Veterans Health Administration Performance Data

The VA Office of Operational Analytics and Reporting adapted the SAIL Value Model to help define performance expectations within VA. This model includes measures on healthcare quality, employee satisfaction, access to care, and efficiency, but has noted limitations for identifying all areas of clinical risk. The data are presented as one “way to understand the similarities and differences between the top and bottom performers” within VHA.

VA also uses a star-rating system where facilities with a “5-Star” rating are performing within the top 10 percent of facilities and “1-Star” facilities are performing within the bottom 10 percent of facilities. Figure 5 describes the distribution of facilities by star rating.²² As of June 30, 2017, the Facility was rated at “2-Star” for overall quality.

Figure 5. Strategic Analytics for Improvement and Learning Star Rating Distribution (as of June 30, 2017)

Source: VA Office of Informatics and Analytics’ Office of Operational Analytics and Reporting (accessed December 8, 2017)

Figure 6 illustrates the Facility’s Quality of Care and Efficiency metric rankings and performance compared with other VA facilities as of June 30, 2017. Of note, Figure 6 uses blue and green data points to indicate high performance (for example in the areas of Acute Care 30-Day Standardized Mortality Ratio (SMR30), Complications, and Capacity).²³ Metrics that need improvement are denoted in orange and red (for example, Comprehensiveness, Rating (of) Primary Care (PC) Provider, Continued (Cont) Stay Reviews Met, and Adjusted Length of Stay (LOS)).

²² Based on normal distribution ranking quality domain of 128 VA Medical Centers.

²³ For data definitions of acronyms in the SAIL metrics, please see Appendix D.

**Figure 6. Facility Quality of Care and Efficiency Metric Rankings
 (as of June 30, 2017)**

Source: VHA Support Service Center

Note: The OIG did not assess VA’s data for accuracy or completeness. Also see Appendix C for sample outpatient performance measures that feed into these data points (such as wait times, discharge contacts, and where patient care is received). For data definitions, see Appendix D.

Conclusion

The Facility’s leadership team is relatively new, and the Acting Assistant Director was not permanently assigned. With that exception, the executive leaders had been working together as a team since October 2017. OIG’s review of accreditation organization findings, sentinel events, disclosures, Patient Safety Indicator data, and SAIL results did not identify any substantial organizational risk factors. Although OIG’s review of survey data suggested generally satisfied employees, opportunities appear to exist to improve outpatient experiences. The senior leadership team was knowledgeable about selected SAIL metrics but should continue to take actions to improve care and performance of selected Quality of Care and Efficiency metrics likely contributing to the “2-Star” ranking.

Quality, Safety, and Value

VHA's goal is to serve as the nation's leader in delivering high-quality, safe, reliable, and veteran-centered care using a coordinated care continuum. To meet this goal, VHA must foster a culture of integrity and accountability that is vigilant and mindful, proactively risk aware, and predictable, while seeking continuous improvement.²⁴ VHA also strives to provide healthcare services that compare favorably to the best of the private sector in measured outcomes, value, and efficiency.²⁵

VHA requires that its facilities operate a Quality, Safety, and Value (QSV) program to monitor the quality of patient care and performance improvement activities. The purpose of the OIG review was to determine whether the Facility implemented and incorporated selected key functions of VHA's Enterprise Framework for QSV into local activities. To assess this area of focus, the OIG evaluated the following: protected peer reviews of clinical care,²⁶ utilization management (UM) reviews,²⁷ and patient safety incident reporting with related root cause analyses.²⁸

VHA has implemented approaches to improving patient safety, including the reporting of patient safety incidents to its National Center of Patient Safety. Incident reporting helps VHA learn about system vulnerabilities and how to address them. Required root cause analyses help to more accurately identify and rapidly communicate potential and actual causes of harm to patients throughout the organization.²⁹

²⁴ VHA Directive 1026; *VHA Enterprise Framework for Quality, Safety, and Value*, August 2, 2013.

²⁵ Department of Veterans Affairs, *Veterans Health Administration Blueprint for Excellence*, September 2014.

²⁶ According to VHA Directive 2010-025 (June 3, 2010), this is a peer evaluation of the care provided by individual providers within a selected episode of care. This also involves a determination of the necessity of specific actions, and confidential communication is given to the providers who were peer reviewed regarding the results and any recommended actions to improve performance. The process may also result in identification of systems and process issues that require special consideration, investigation, and possibly administrative action by facility staff. (Due for recertification June 30, 2015, but has not been updated.)

²⁷ According to VHA Directive 1117, UM reviews evaluate the appropriateness, medical need, and efficiency of healthcare services according to evidence-based criteria.

²⁸ According to VHA Handbook 1050.01, *VHA National Patient Safety Improvement Handbook*, March 4, 2011, VHA has implemented approaches to improve patient safety, including the reporting of patient safety incidents to VHA National Center of Patient Safety, in order for VHA to learn about system vulnerabilities and how to address them as well as the requirement to implement root cause analysis (a widely-used methodology for dealing with safety-related issues) to allow for more accurate and rapid communication throughout an organization of potential and actual causes of harm to patients.

²⁹ VHA Handbook 1050.01.

The OIG interviewed senior managers and key QSV employees and evaluated meeting minutes, protected peer reviews, root cause analyses, the annual patient safety report, and other relevant documents. Specifically, OIG inspectors evaluated the following performance indicators:³⁰

- Protected peer reviews
 - Examination of important aspects of care (for example, appropriate and timely ordering of diagnostic tests, prompt treatment, and appropriate documentation)
 - Implementation of improvement actions recommended by the Peer Review Committee
- UM
 - Completion of at least 75 percent of all required inpatient reviews
 - Documentation of at least 75 percent of Physician UM Advisors' decisions in National UM Integration database
 - Interdisciplinary review of UM data
- Patient safety
 - Entry of all reported patient incidents into WebSPOT³¹
 - Annual completion of a minimum of eight root cause analyses
 - Provision of feedback about root cause analysis actions to reporting employees
 - Submission of annual patient safety report

Conclusion

The OIG found general compliance with requirements for protected peer reviews, UM, and patient safety. The OIG made no recommendations.

³⁰ For CHIP reviews, the OIG selects performance indicators based on VHA or regulatory requirements or accreditation standards and evaluates these for compliance.

³¹ WebSPOT is the software application used for reporting and documenting adverse events in the VHA (National Center for Patient Safety) Patient Safety Information System database.

Credentialing and Privileging

VHA has defined procedures for the credentialing and privileging of all healthcare professionals who are permitted by law and the facility to practice independently—without supervision or direction, within the scope of the individual’s license, and in accordance with individually-granted clinical privileges. These healthcare professionals are also referred to as licensed independent practitioners (LIP).³²

Credentialing refers to the systematic process of screening and evaluating qualifications. Credentialing involves ensuring an applicant has the required education, training, experience, and mental and physical health. This systematic process also ensures that the applicant has the skill to fulfill the requirements of the position and to support the requested clinical privileges.³³

Clinical privileging is the process by which an LIP is permitted by law and the facility to provide medical care services within the scope of the individual’s license. Clinical privileges need to be specific, based on the individual’s clinical competence, recommended by service chiefs and the Medical Staff Executive Committee, and approved by the Director. Clinical privileges are granted for a period not to exceed two years, and LIPs must undergo re-privileging prior to the expiration of the held privileges.³⁴

The purpose of the OIG review was to determine whether the Facility complied with selected requirements for credentialing and privileging of selected members of the medical staff. The OIG team interviewed key managers and reviewed the credentialing and privileging folders of 10 LIPs who were hired within 18 months prior to the on-site visit,³⁵ and 20 LIPs who were re-privileged within 12 months prior to the visit.³⁶ The OIG evaluated the following performance indicators:

- Credentialing
 - Current licensure
 - Primary source verification
- Privileging
 - Verification of clinical privileges
 - Requested privileges

³² VHA Handbook 1100.19, *Credentialing and Privileging*, October 15, 2012. (Due for recertification October 31, 2017, but has not been updated.)

³³ VHA Handbook 1100.19.

³⁴ VHA Handbook 1100.19.

³⁵ The 18-month period was from July 11, 2016, through January 5, 2018.

³⁶ The 12-month review period was from January 5, 2017, through January 5, 2018.

- Facility-specific
- Service-specific
- Provider-specific
- o Service chief recommendation of approval for requested privileges
- o Medical Staff Executive Committee decision to recommend requested privileges
- o Approval of privileges for a period of less than, or equal to, two years
- Focused Professional Practice Evaluation (FPPE)
 - o Evaluation initiated
 - Timeframe clearly documented
 - Criteria developed
 - Evaluation by another provider with similar training and privileges
 - Medical Staff Executive Committee decision to recommend continuing initially-granted privileges based on results
- Ongoing Professional Practice Evaluation (OPPE)
 - o Determination to continue privileges
 - Criteria specific to the service or section
 - Evaluation by another provider with similar training and privileges
 - Medical Staff Executive Committee decision to recommend continuing privileges

Conclusion

The OIG found general compliance with the above performance indicators. The OIG made no recommendations.

Environment of Care

Any medical center, regardless of its size or location, faces vulnerabilities in the healthcare environment. VHA requires managers to conduct EOC inspection rounds and resolve issues in a timely manner. The goal of the EOC program is to reduce and control environmental hazards and risks; prevent accidents and injuries; and maintain safe conditions for patients, visitors, and staff. The physical environment of a healthcare organization must not only be functional but should also promote healing.³⁷

The purpose of the OIG review was to determine whether the Facility maintained a clean and safe healthcare environment in accordance with applicable requirements.³⁸ The OIG also determined whether the Facility met requirements in selected areas that are often associated with higher risks of harm to patients, in this case, with a special emphasis on construction safety³⁹ and Nutrition and Food Services processes.⁴⁰

VHA requires a safe and healthy worksite for staff, patients, and the general public during construction and renovation-related activities. The implementation of a proactive and comprehensive construction safety program reduces the potential for injury, illness, accidents, or exposures.⁴¹

The Nutrition and Food Services Program must provide quality meals that meet the regulatory requirements for food safety in accordance with the U.S. Food and Drug Administration's Food Code and VHA's food safety program. Facilities must have annual hazard analysis critical control point food safety plan, food services inspections, food service emergency operations plan, and safe food transportation and storage practices.⁴²

In all, the OIG inspected 14 patient care areas. At the Seattle campus, the OIG inspected six inpatient units (medical intensive care, surgical intensive care, medical/surgical, general medicine 6W, bone marrow transplant, and post-anesthesia care), the Emergency Department, pre-operative unit, Rainier primary care clinic, West Eye clinic, Nutrition/Food Service, Community Living Center, and a construction site. At the American Lake campus, the OIG inspected a primary care and a specialty care clinic, Nutrition/Food Service, and the Community

³⁷ VHA Directive 1608, *Comprehensive Environment of Care*, February 1, 2016.

³⁸ Applicable requirements include various VHA Directives, Joint Commission hospital accreditation standards, Occupational Safety and Health Administration, American National Standards Institute (ANSI)/Association for the Advancement of Medical Instrumentation (AAMI), and National Fire Protection Association (NFPA).

³⁹ VHA Directive 7715, *Safety and Health during Construction*, April 6, 2017.

⁴⁰ VHA Handbook 1109.04, *Food Service Management Program*, October 11, 2013.

⁴¹ VHA Directive 7715.

⁴² VHA Handbook 1109.04.

Living Center. The team also inspected the South Sound VA Clinic.⁴³ The OIG reviewed the most recent Infection Prevention Risk Assessment, Infection Prevention/Control Committee minutes for the past six months, and other relevant documents, and interviewed key employees and managers. The OIG evaluated the following location-specific performance indicators:

- Parent Facility
 - EOC rounds
 - EOC deficiency tracking
 - Infection prevention
 - General safety
 - Environmental cleanliness
 - General privacy
 - Women veterans' exam room privacy
 - Availability of medical equipment and supplies
- Community Based Outpatient Clinic
 - General safety
 - Medication safety and security
 - Infection prevention
 - Environmental cleanliness
 - General privacy
 - Exam room privacy
 - Availability of medical equipment and supplies
- Construction Safety
 - Completion of infection control risk assessment for all sites
 - Infection Prevention/Infection Control Committee discussions on construction activities
 - Dust control
 - Safety and security

⁴³ Each outpatient site selected for physical inspection was randomized from all primary care CBOCs, multi-specialty CBOCs, and healthcare centers reporting to the parent Facility and was operational and classified as such in VA's Site Tracking Database by August 15, 2017.

- Selected requirements based on project type and class⁴⁴
- Nutrition and Food Services
 - Annual Hazard Analysis Critical Control Point Food Safety System plan
 - Food Services inspections
 - Emergency operations plan for food service
 - Safe transportation of prepared food
 - Environmental safety
 - Infection prevention
 - Storage areas

Conclusion

General safety, environmental cleanliness, and privacy measures were in place at the parent Facility in Seattle and at the American Lake campus. However, the OIG identified deficiencies with attendance on EOC rounds, discussion of construction activities in the Infection Control Committee minutes, and temperature monitoring of nutrition and food storage areas that warranted recommendations for improvement. Additionally, the OIG identified a deficiency with inspection of medical equipment at the representative CBOC.

Parent Facility's Environment of Care Rounds Attendance

VHA requires facilities to perform comprehensive EOC rounds with a designated team that includes specific membership to ensure a safe, clean, and high-quality care environment.⁴⁵ From October 1, 2016, through September 30, 2017, 8 of 13 required members did not consistently attend rounds. This resulted in a lack of subject matter experts on EOC rounds. Facility managers were aware of the requirements, but vacancies and competing priorities prevented compliance.

⁴⁴ VA Master Construction Specifications, Section 01-35-26, Sub-Section 1.12. The Type assigned to construction work ranges from Type A (non-invasive activities) to Type D (major demolition and construction). Type C construction involves work that generated a moderate to high level of dust or requires demolition or removal of any fixed building components or assemblies. The Class assigned to construction work ranges from Class I (low-risk groups affected) to Class IV (highest risk groups affected). Class III construction projects affect patients in high-risk areas such as the Emergency Department, inpatient medical and surgical units, and the pharmacy.

⁴⁵ According to VHA, core membership is composed of representatives from programmatic areas such as nursing, infection control, patient safety, and medical equipment management to ensure adherence to various program requirements.

Recommendation 1

1. The Deputy Director ensures required team members consistently participate on environment of care rounds and monitors team members' compliance.

Facility concurred.

Target date for completion: August 31, 2018

Facility response: A new process for conducting Environment of Care (EOC) Rounds and tracking attendance was implemented as of March 2018. Facility leadership will ensure consistent participation through weekly tracking and monthly reviews of attendance. Attendance results are also reported monthly to the EOC Board, which is chaired by the Assistant Director. Evidence of sustained compliance will be demonstrated through 85% or greater attendance at the EOC rounds over three (3) consecutive months.

CBOC: General Safety

VHA Center for Engineering and Occupational Safety and Health (CEOSH) requires facilities to have a mechanism or method in place for clinical staff to be confident that equipment used for patients are safe and functional.⁴⁶ The Facility uses dated stickers to indicate the due date of the next inspection. At the South Sound VA Clinic, the OIG identified 16 medical equipment items with expired inspection dates. Facility managers were aware of noncompliance and stated that a contract vendor had been contacted to perform the required inspections.

Recommendation 2

2. The Deputy Director ensures all medical equipment at the South Sound VA Clinic is identified as safe for patient use and monitors compliance.

Facility concurred.

Target date for completion: April 30, 2018

Facility response: Sterling Medical (the contractor for the South Sound CBOC) sent a technician on January 16, 2018 to complete annual preventive maintenance on all medical equipment in the CBOC. The CBOC Manager submitted a report to the CBOC Liaison. Future reports will be submitted to the CBOC Liaison within 5-days after the preventative maintenance is completed. Compliance will be reported to the Environment of Care Board annually beginning with the March 2018 meeting. Evidence of compliance will be demonstrated through documentation of reporting to the March 2018 EOC Board.

⁴⁶ Environment of Care Guidebook, *VHA Center for Engineering & Occupational Safety and Health (CEOSH)*, June 2017.

Construction Safety: Infection Control Committee Discussions on Construction Activities

TJC requires facilities to identify risks for acquiring and transmitting infections based on the analysis of surveillance activities and other infection control data and to prioritize those risks.⁴⁷ These requirements help to ensure that infection prevention and control programs are effective. The OIG noted that Infection Control Committee meeting minutes did not consistently document discussions of on-going construction activities. Facility managers cited a lack of attention to detail.

Recommendation 3

3. The Chief of Staff ensures the Infection Control Committee consistently documents discussions of on-going construction activities and monitors compliance.

Facility concurred.

Target date for completion: April 30, 2018

Facility response: Starting in January 2018, construction site inspections were added as a monthly agenda item to the Infection Control Committee. Evidence of compliance will be demonstrated through three (3) consecutive months of reporting to the Infection Control Committee.

Nutrition and Food Services: Temperature Monitoring

VHA requires facilities monitor the temperature levels in dry food storage areas to optimize food safety and quality.⁴⁸ The Facility did not monitor temperature levels in dry storage areas at the Seattle and American Lake campuses. This resulted in the inability to ensure that food was safely stored. The reason provided for noncompliance was that Nutrition and Food Service managers were unaware of this requirement.

⁴⁷ TJC. Infection Prevention and Control: IC.01.03.01, EP 3 and 5, July 2017.

⁴⁸ VHA Handbook 1109.04, *Food Services Management Program*, October 11, 2013.

Recommendation 4

4. The Assistant Director ensures temperature monitoring occurs in dry food storage areas and monitors compliance.

Facility concurred.

Target date for completion: June 30, 2018

Facility response: Work orders were placed on January 10, 2018 to add check point sensors to both Seattle and American Lake food service dry storage areas. The sensors were placed on January 12, 2018. Check point temperature monitoring is accomplished per VA Puget Sound Policy EC-94, Central Monitoring of Storage Temperatures. Evidence of compliance will be demonstrated through 90% or greater of temperature monitoring for three (3) consecutive months and data will be reported to the EOC Board.

Medication Management: Controlled Substances Inspection Program

The Controlled Substances (CS) Act divides controlled drugs into five categories based on whether they have a currently accepted medical treatment use in the United States, their relative abuse potential, and likelihood of causing dependence when abused.⁴⁹ Diversion by healthcare workers—the transfer of a legally-prescribed CS from the prescribed individual to another person for illicit use—remains a serious problem that can increase serious patient safety issues, causes harm to the diverter, and elevates the liability risk to healthcare organizations.⁵⁰

VHA requires that facility managers implement and maintain a CS inspection program to minimize the risk for loss and diversion and to enhance patient safety.⁵¹ Requirements include the appointment of CS Coordinator(s) (CSC) and CS inspectors (CSI), procedures for inventory control, and the inspection of the pharmacy and clinical areas with CS.

The OIG review of these issues was conducted to determine whether the Facility complied with requirements related to CS security and inspections and to follow up on recommendations from the 2014 report.⁵² The OIG team interviewed key managers and reviewed CS inspection reports for the prior two completed quarters;⁵³ monthly summaries of findings, including discrepancies, provided to the-Director for the prior 12 months;⁵⁴ CS inspection quarterly trend reports for the prior four quarters;⁵⁵ and other relevant documents. The OIG evaluated the following performance indicators:

- CSC reports
 - Monthly summary of findings to the Director
 - Quarterly trend report to the Director
 - Actions taken to resolve identified problems

(*Due for recertification November 30, 2015, but has not been updated*); VA Office of Inspector General, *Combined Assessment Program Summary Report – Evaluation of the Controlled Substances Inspection Program at Veterans Health Administration Facilities*, Report No. 14-01785-184, June 10, 2014.

⁵² VA Office of Inspector General, *Combined Assessment Program Summary Report – Evaluation of the Controlled Substances Inspection Program at Veterans Health Administration Facilities*, Report No. 14-01785-184, June 10, 2014.

⁵³ The review period was from July through December 2017.

⁵⁴ The review period was from January through December 2017.

⁵⁵ The four quarters were from Quarter 1 (October 1, 2016 through December 31, 2016) through Quarter 4 (July 1, 2017 through September 30, 2017) of 2017.

- Pharmacy operations
 - Annual physical security survey of the pharmacy/pharmacies by VA Police
 - CS ordering processes
 - Inventory completion during Chief of Pharmacy transition
 - Staff restrictions for monthly review of balance adjustments
- Requirements for CSCs
 - Free from conflicts of interest
 - CSC duties included in position description or functional statement
 - Completion of required CSC orientation training course
- Requirements for CSIs
 - Free from conflicts of interest
 - Appointed in writing by the Director for a term not to exceed three years
 - Hiatus of one year between any reappointment
 - Completion of required CSI certification course
 - Completion of required annual updates and/or refresher training
- CS area inspections
 - Monthly inspections
 - Rotations of CSIs
 - Patterns of inspections
 - Completion of inspections on day initiated
 - Reconciliation of dispensing between pharmacy and each dispensing area
 - Verification of CS orders
 - CS inspections performed by CSIs
- Pharmacy inspections
 - Monthly physical counts of the CS in the pharmacy by CSIs
 - Completion of inspections on day initiated

- Security and documentation of drugs held for destruction⁵⁶
- Accountability for all prescription pads in pharmacy
- Verification of hard copy outpatient pharmacy CS prescriptions
- Verification of 72-hour inventories of the main vault
- Quarterly inspections of emergency drugs
- Monthly CSI checks of locks and verification of lock numbers

Conclusion

Generally, the OIG noted compliance with requirements for most of the performance indicators reviewed, including CSC monthly and quarterly reports, annual physical security surveys, ordering/procurement process, monthly review, and the CSC and CSIs having no conflicts of interest and completing required training. However, the OIG identified deficiencies in one-day reconciliation and return of stock processes.

Controlled Substances Area Inspections: Reconciliation of Dispensing and Return of Stock for One Random Day

VHA requires CS program staff to reconcile one random day's stocking/refilling from the pharmacy to every automated dispensing cabinet and one random day's return of stock to pharmacy from every automated dispensing cabinet during CS area inspections.⁵⁷ The reconciliation provides the opportunity to identify potential drug diversion activities and any discrepancies with refilling or returning CS.

The OIG found that reconciliation of stocking/refilling activities was not conducted in 5 of the 10 CS areas for the six months of inspection reports reviewed. The OIG also noted that the Facility had not implemented the reconciliation of returning stock to the pharmacy in any of the CS areas. Program coordinators believed that the report used by the alternate CSC to review one-day reconciliation met the requirement while also admitting that the report did not capture all CS areas, particularly those with minimal CS volume and infrequent dispensing activities. Program coordinators also reported that the reconciliation of returning stock to the pharmacy was a relatively new process for the inspection program and that the plan for implementation had not yet been discussed with pharmacy.

⁵⁶ The "Destructions File Holding Report" lists all drugs awaiting local destruction or turn-over to a reverse distributor. CSIs must verify there is a corresponding sealed evidence bag containing drug(s) for each destruction holding number on the report.

⁵⁷ VHA Directive 1108.02(1), *Inspection of Controlled Substances*, November 28, 2016. Amended March 6, 2017.

Recommendation 5

5. The Facility Director ensures that reconciliation of controlled substance refills to automated dispensing units in patient care areas and returns to pharmacy stock are performed during controlled substance inspections and monitors compliance.

Facility concurred.

Target date for completion: June 30, 2018

Facility response: A spreadsheet was developed to track bi-directional movement of controlled substances between the Pharmacy and the units. Reconciliation has been completed through February 2018. Weekly monitoring has been initiated as of March 2018 and will be included in the monthly reports to Facility leadership. Evidence of compliance with an expectation of 90 percent or better compliance will be demonstrated through three (3) consecutive months of reports to Facility leadership.

Mental Health Care: Post-Traumatic Stress Disorder Care

Post-Traumatic Stress Disorder (PTSD) may occur “following exposure to an extreme traumatic stressor involving direct personal experience of an event that involves actual or threatened death or serious injury; other threat to one’s physical integrity; witnessing an event that involves death, injury, or threat to the physical integrity of another person; learning about unexpected or violent death, serious harm, threat of death or injury experienced by a family member or other close associate.”⁵⁸ For veterans, the most common traumatic stressor contributing to a PTSD diagnosis is war-zone related stress. Non-war zone military experiences, such as the crash of a military aircraft, may also contribute to the development of PTSD.⁵⁹

The PTSD screen is performed through a required national clinical reminder and is triggered for completion when the patient has his or her first visit at a VHA medical facility. The reminder typically remains active until it is completed.⁶⁰ VHA requires that

1. PTSD screening is performed for every new patient and then is repeated every year for the first five years post-separation and every five years thereafter, unless there is a clinical need to re-screen earlier;
2. If the patient’s PTSD screen is positive, an acceptable provider must evaluate treatment needs and assess for suicide risk; and
3. If the provider determines a need for treatment, there is evidence of referral and coordination of care.⁶¹

To assess whether the Facility complied with the requirements related to PTSD screening, diagnostic evaluation, and referral to specialty care, the OIG team reviewed relevant documents and interviewed key employees and managers. Additionally, the OIG reviewed the electronic health records (EHR) of 50 randomly selected outpatients who had a positive PTSD screen from July 1, 2016, through June 30, 2017. The OIG evaluated the following performance indicators:

- Completion of suicide risk assessment by acceptable provider within required timeframe
- Offer to patient of further diagnostic evaluation
- Referral for diagnostic evaluation

⁵⁸ VHA Handbook 1160.03, *Programs for Veterans with Post-Traumatic Stress Disorder (PTSD)*, March 12, 2010. (Due for recertification March 31, 2015, and revised December 8, 2015, but has not been updated.)

⁵⁹ VHA Handbook 1160.03.

⁶⁰ A PTSD screen is not required if the patient received a PTSD diagnosis in outpatient setting in the past year; has a life expectancy of 6 months or less; has severe cognitive impairment, including dementia; is enrolled in a VHA or community-based hospice program; or has a diagnosis of cancer of the liver, pancreas, or esophagus.

⁶¹ VHA Handbook 1160.03.

- Completion of diagnostic evaluation within required timeframe

Conclusion

The OIG found general compliance with the above performance indicators. The OIG made no recommendations.

Long-term Care: Geriatric Evaluations

More than nine million veterans of all ages are enrolled with VA, and 46 percent of these veterans are age 65 and over.⁶² As a group, veterans experience more chronic disease and disability than their non-veteran peers. VA must plan for the growing health demands by aging veterans and to have mechanisms in place for delivering those services in an appropriate and cost-effective manner.⁶³ Participants in geriatric evaluation (GE) programs have been shown to be significantly less likely to lose functional ability, experience health-related restrictions in their daily activities, or use home healthcare services.⁶⁴

In 1999, the Veterans Millennium Benefits and Healthcare Act mandated that the veterans' standard benefits package include access to GE.⁶⁵ This includes a comprehensive, multidimensional assessment and the development of an interdisciplinary plan of care. The healthcare team would then manage the patient with treatment, rehabilitation, health promotion, and social service interventions necessary for fulfillment of the plan of care by key personnel.⁶⁶ Facility-leaders must also evaluate the GE program through a review of program objectives, procedures for monitoring care processes and outcomes, and analyses of findings.⁶⁷

In determining whether the Facility provided an effective geriatric evaluation, OIG staff reviewed relevant documents and interviewed key employees and managers. Additionally, the team reviewed the EHRs of 38 randomly selected patients who received a GE from July 1, 2016, through June 30, 2017. The OIG evaluated the following performance indicators:

- Program oversight and evaluation
 - Evidence of GE program evaluation
 - Evidence of performance improvement activities through leadership board
- Provision of clinical care
 - Medical evaluation by GE provider
 - Assessment by GE nurse
 - Patient or family education

⁶² VHA Directive 1140.04, *Geriatric Evaluation*, November 28, 2017.

⁶³ VHA Directive 1140.04.

⁶⁴ Chad Boulton, Lisa B. Boulton, Lynne Morishita, Bryan Dowd, Robert L. Kane, and Cristina F. Urdangarin, "A randomized clinical trial of outpatient geriatric evaluation and management," *Journal of the American Geriatrics Society* 49, no. 4 (April 2001): 351–359.

⁶⁵ Public Law 106-117.

⁶⁶ VHA Directive 1140.11, *Uniform Geriatrics and Extended Care Services in VA Medical Centers and Clinics*, October 11, 2016.

⁶⁷ VHA Directive 1140.04.

- Plan of care based on GE
- Geriatric management
 - Implementation of interventions noted in plan of care

Conclusion

The OIG found general compliance with the above performance indicators. The OIG made no recommendations.

Women's Health: Mammography Results and Follow-Up

In 2017, an estimated 252,710 new cases of invasive breast cancer and 40,610 breast cancer deaths were expected to occur among US women.⁶⁸ Timely screening, diagnosis, notification, and treatment are essential to early detection and optimal patient outcomes.

The Veterans Health Care Amendments of 1983 mandated VA provide veterans with preventive care, including breast cancer screening.⁶⁹ The Veterans Health Care Act of 1992 also authorized VA to provide gender-specific services, including mammography services to eligible women veterans.⁷⁰

VHA has established timeframes for clinicians to notify ordering providers and patients of mammography results. "Incomplete" and "probably benign" results must be communicated to the ordering provider within 30 days of the procedure and to the patient within 14 calendar days from the date the results are available to the ordering provider. "Suspicious" and "highly suggestive of malignancy" results must be communicated to the ordering provider within three business days of the procedure, and the recommended course of action should be communicated to the patient as soon as possible, with seven calendar days representing the outer acceptable limit. Verbal communication with patients must be documented.⁷¹

The OIG team examined whether the Facility complied with selected VHA requirements for the reporting of mammography results by again reviewing relevant documents and interviewing relevant employees and managers. The team also reviewed the EHRs of 47 randomly selected women veteran patients who received a mammogram from July 1, 2016, through June 30, 2017. The OIG evaluated the following performance indicators:

- Electronic linking of mammogram results to radiology order
- Scanning of hard copy mammography reports, if outsourced
- Inclusion of required components in mammography reports
- Communication of results and any recommended course of action to ordering provider
- Communication of results and any recommended course of action to patient
- Performance of follow-up mammogram if indicated

⁶⁸ U.S. Breast Cancer Statistics. <http://www.BreastCancer.org> website. (Website accessed on May 18, 2017.)

⁶⁹ Veterans Health Care Amendments of 1983, Pub. L. 98-160 (1983).

⁷⁰ Veterans Health Care Act of 1992, Title I, Pub. L. 102-585 (1992).

⁷¹ VHA Directive 1330.01, *Health Care Services for Women Veterans*, February 15, 2017 (amended September 8, 2017); VHA Handbook 1105.03, *Mammography Program Procedures and Standards*, April 28, 2011. (Due for recertification April 30, 2016, but has not been updated.)

- Performance of follow-up study⁷²

Conclusion

The OIG found general compliance with the above performance indicators. The OIG made no recommendations.

⁷² This performance indicator did not apply to this Facility.

High-Risk Processes: Central Line-Associated Bloodstream Infections

TJC requires facilities to establish systematic infection prevention and control programs to reduce the risk of acquiring and transmitting infections.⁷³ Central lines “refer to a broad category of intravascular (within blood vessels) devices used to administer fluids, medications, blood and blood products, and parenteral nutrition. Unlike the short, temporary catheters inserted into the peripheral vasculature,”⁷⁴ central lines are threaded through a vein in the arm, chest, neck, or groin and advanced so that the furthest tip terminates at or close to the heart or in one of the great vessels.⁷⁵

The use of central lines has greatly facilitated the care provided to patients; however, they are not without their risks. The Centers for Disease Control and Prevention defines a central line-associated bloodstream infection (CLABSI) as a “primary bloodstream infection that develops in a patient with a central line in place. This type of infection occurs within the 48 hours of insertion and is not related to infection at another site.”⁷⁶

Infections occurring on or after the third calendar day following admission to an inpatient location are considered “healthcare-associated.”⁷⁷ The patient’s age, underlying conditions, and gender are basic risk factors, but external risk factors such as prolonged hospitalization, multi-lumen central lines, and central line duration far outnumber the basic ones. External factors are associated with a 2.27-fold increased risk for mortality and increased healthcare costs.⁷⁸

The OIG’s review of these issues examined whether the Facility established and maintained programs to reduce the incidence of healthcare-associated bloodstream infections in intensive care unit patients with indwelling central lines. In addition to conducting manager and staff interviews, the OIG team reviewed committee minutes, the Infection Prevention/Control Risk Assessment, and other relevant documents. The team also reviewed the training records of 23 clinical employees involved in inserting and/or managing central lines. The OIG evaluated the following performance indicators:

- Presence of Facility policy on the use and care of central lines

⁷³ TJC. Infection Control and National Patient Safety Goals: IC.01.03.01, EP 4, 5, July 2017.

⁷⁴ Association for Professionals in Infection Control and Epidemiology, *Guide to Preventing Central Line-Associated Bloodstream Infections*, 2015.

⁷⁵ These are vessels that enter and leave the heart—superior and inferior vena cava, pulmonary artery, pulmonary vein, aorta.

⁷⁶ The Centers for Disease Control and Prevention, *Guidelines for the Prevention of Intravascular Catheter-Related Infections*, 2011.

⁷⁷ The Centers for Disease Control and Prevention National Healthcare Safety Network, *Bloodstream Infection Event: Central Line-Associated Bloodstream Infection and non-central line-associated Bloodstream Infection*, January 2017.

⁷⁸ Association for Professionals in Infection Control and Epidemiology, 2015.

- Performance of annual infection prevention risk assessment
- Evidence of routine discussion of CLABSI data and prevention outcome measures in committee minutes
- Provision of infection incidence data on CLABSI
- Education on reducing the risk of CLABSI for staff involved in inserting and/or managing central lines
- Educational materials about CLABSI prevention for patients and families
- Use of a checklist for central line insertion and maintenance

Conclusion

The OIG found general compliance with the above performance indicators. The OIG made no recommendations.

Appendix A: Summary Table of Comprehensive Healthcare Inspection Program Review Findings

Healthcare Processes	Performance Indicators	Conclusion
Leadership and Organizational Risks	<ul style="list-style-type: none"> • Executive leadership stability and engagement • Employee satisfaction and patient experience • Accreditation/for-cause surveys and oversight inspections • Indicators for possible lapses in care • VHA performance data 	Five OIG recommendations, ranging from documentation issues to deficiencies that can lead to patient and staff safety issues or adverse events, are attributable to the Director, Chief of Staff, Deputy Director, and Assistant Director. Appendix B: Facility Profile and VA Outpatient Clinic Profiles

Facility Profile

The table below provides general background information for this highest complexity (1a)⁷⁹ affiliated⁸⁰ Facility reporting to VISN 20.

**Table 6. Facility Profile for Seattle (663)
(October 1, 2014, through September 30, 2017)**

Profile Element	Facility Data FY 2015 ⁸¹	Facility Data FY 2016 ⁸²	Facility Data FY 2017 ⁸³
Total Medical Care Budget in Millions	\$778.3	\$830.9	\$836.6
Number of:			
• Unique Patients	100,769	104,591	105,107
• Outpatient Visits	1,016,880	1,044,710	1,025,692
• Unique Employees ⁸⁴	3,412	3,514	3,554
Type and Number of Operating Beds:			
• Blind Rehabilitation	11	11	9
• Community Living Center	121	121	121
• Domiciliary	64	64	64
• Medicine	82	82	82
• Mental Health	25	25	25
• Rehabilitation Medicine	12	12	12
• Residential Psychosocial	24	24	19
• Spinal Cord	38	38	38
• Surgery	44	44	44
Average Daily Census:			

⁷⁹ The VHA medical centers are classified according to a Facility complexity model; 1a designation indicates a Facility with high volume, high-risk patients, most complex clinical programs, and large research and teaching programs.

⁸⁰ Associated with a medical residency program.

⁸¹ October 1, 2014, through September 30, 2015.

⁸² October 1, 2015, through September 30, 2016.

⁸³ October 1, 2016, through September 30, 2017.

⁸⁴ Unique employees involved in direct medical care (cost center 8200).

Profile Element	Facility Data FY 2015 ⁸¹	Facility Data FY 2016 ⁸²	Facility Data FY 2017 ⁸³
• Blind Rehabilitation	7	6	6
• Community Living Center	80	80	84
• Domiciliary	52	47	44
• Medicine	59	66	72
• Mental Health	18	16	17
• Rehabilitation Medicine	7	6	6
• Residential Psychosocial	17	15	14
• Spinal Cord	21	23	21
• Surgery	21	19	19

Note: The OIG did not assess VA's data for accuracy or completeness.

VA Outpatient Clinic Profiles⁸⁵

The VA outpatient clinics in communities within the catchment area of the Facility provide PC integrated with women’s health, MH, and telehealth services. Some also provide specialty care, diagnostic, and ancillary services. Table 7 provides information relative to each of the clinics.

Table 7. VA Outpatient Clinic Workload/Encounters⁸⁶ and Specialty Care, Diagnostic, and Ancillary Services Provided (October 1, 2016, through September 30, 2017)

Location	Station No.	PC Workload/ Encounters	MH Workload/ Encounters	Specialty Care Services ⁸⁷ Provided	Diagnostic Services ⁸⁸ Provided	Ancillary Services ⁸⁹ Provided
Bellevue, WA	663GA	20,081	3,228	Dermatology Anesthesia	n/a	Nutrition Weight Management
Bremerton, WA	663GB	8,584	2,136	Dermatology Poly-Trauma Anesthesia	n/a	Nutrition Pharmacy Social Work Weight Management
Mount Vernon, WA	663GC	13,753	3,691	Dermatology Blind Rehab Poly-Trauma Rehab Physician Anesthesia Eye Podiatry	n/a	Pharmacy Weight Management Dental

⁸⁵ Includes all outpatient clinics in the community that were in operation as of August 15, 2017.

⁸⁶ An encounter is a professional contact between a patient and a practitioner vested with responsibility for diagnosing, evaluating, and treating the patient’s condition.

⁸⁷ Specialty care services refer to non-PC and non-MH services provided by a physician.

⁸⁸ Diagnostic services include EKG, EMG, laboratory, nuclear medicine, radiology, and vascular lab services.

⁸⁹ Ancillary services include chiropractic, dental, nutrition, pharmacy, prosthetic, social work, and weight management services.

Location	Station No.	PC Workload/ Encounters	MH Workload/ Encounters	Specialty Care Services ⁸⁷ Provided	Diagnostic Services ⁸⁸ Provided	Ancillary Services ⁸⁹ Provided
Chehalis, WA	663GD	8,296	3,673	Dermatology Poly-Trauma Anesthesia	n/a	Pharmacy

n/a = Not applicable

Appendix C: Patient Aligned Care Team Compass Metrics⁹⁰

Source: VHA Support Service Center.

Note: The OIG did not assess VA’s data for accuracy or completeness. During the inspection of the South Sound CBOC, staff reported to the OIG that staffing issues with providers resulted in wait times greater than 30 days for the months of April through October 2017.

Data Definition: The average number of calendar days between a new patient’s PC completed appointment (clinic stops 322, 323, and 350, excluding Compensation and Pension appointments) and the earliest of three possible preferred (desired) dates (Electronic Wait List [EWL], Cancelled by Clinic Appointment, Completed Appointment) from the completed appointment date. Note that prior to FY 2015, this metric was calculated using the earliest possible create date. The absence of reported data is indicated by “n/a.”

⁹⁰ Department of Veterans’ Affairs, Patient Aligned Care Teams Compass Data Definitions, accessed January 17, 2018.

Quarterly Established PC Patient Average Wait Time in Days

Source: VHA Support Service Center.

Note: The OIG did not assess VA’s data for accuracy or completeness.

Data Definition: The average number of calendar days between an established patient’s PC completed appointment (clinic stops 322, 323, and 350, excluding Compensation and Pension appointments) and the earliest of three possible preferred (desired) dates (Electronic Wait List [EWL], Cancelled by Clinic Appointment, Completed Appointment) from the completed appointment date. The absence of reported data is indicated by “n/a.”

Source: VHA Support Service Center.

Note: The OIG did not assess VA’s data for accuracy or completeness.

Data Definition: The percent of assigned PC patients discharged from any VA facility who have been contacted by a PC team member within 2 business days during the reporting period. Patients are excluded if they are discharged from an observation specialty and/or readmitted within 2 business days to any VA facility. Team members must have been assigned to the patient’s team at the time of the patient’s discharge. Team member identification is based on the primary provider on the encounter. Performance measure mnemonic “PACT17.” The absence of reported data is indicated by “n/a.”

Source: VHA Support Service Center.

Note: The OIG did not assess VA's data for accuracy or completeness.

Data Definition: This is a measure of where the patient receives his PC and by whom. A low percentage is better. The formula is the total VHA ER/Urgent Care Encounters While on Team (WOT) with a LIP divided by the number of PC Team Encounters WOT with an LIP plus the total number of VHA ER/Urgent Care Encounters WOT with an LIP. The absence of reported data is indicated by "n/a."

Appendix D: Strategic Analytics for Improvement and Learning (SAIL) Metric Definitions⁹¹

Measure	Definition	Desired Direction
ACSC Hospitalization	Ambulatory Care Sensitive Conditions hospitalizations	A lower value is better than a higher value
Adjusted LOS	Acute care risk adjusted length of stay	A lower value is better than a higher value
Admit Reviews Met	% Acute Admission Reviews that meet InterQual criteria	A higher value is better than a lower value
Best Place to Work	All Employee Survey Best Places to Work score	A higher value is better than a lower value
Call Center Responsiveness	Average speed of call center responded to calls in seconds	A lower value is better than a higher value
Call Responsiveness	Call center speed in picking up calls and telephone abandonment rate	A lower value is better than a higher value
Capacity	Physician Capacity	A lower value is better than a higher value
Care Transition	Care Transition (Inpatient)	A higher value is better than a lower value
Complications	Acute care risk adjusted complication ratio (observed to expected ratio)	A lower value is better than a higher value
Comprehensiveness	Comprehensiveness (PCMH)	A higher value is better than a lower value
Cont Stay Reviews Met	% Acute Continued Stay reviews that meet InterQual criteria	A higher value is better than a lower value
Efficiency	Overall efficiency measured as 1 divided by SFA (Stochastic Frontier Analysis)	A higher value is better than a lower value
Efficiency/Capacity	Efficiency and Physician Capacity	A higher value is better than a lower value
Employee Satisfaction	Overall satisfaction with job	A higher value is better than a lower value

⁹¹ VHA Support Service Center (VSSC), Strategic Analytics for Improvement and Learning (SAIL), accessed: February 14, 2018.

Measure	Definition	Desired Direction
HC Assoc Infections	Healthcare associated infections	A lower value is better than a higher value
HEDIS Like	Outpatient performance measure (HEDIS)	A higher value is better than a lower value
HEDIS Like – HED90_1	HEDIS-EPRP Based PRV TOB BHS	A higher value is better than a lower value
HEDIS Like – HED90_ec	HEDIS-eOM Based DM IHD	A higher value is better than a lower value
MH Wait Time	MH care wait time for new patient completed appointments within 30 days of preferred date	A higher value is better than a lower value
MH Continuity Care	MH continuity of care (FY14Q3 and later)	A higher value is better than a lower value
MH Exp of Care	MH experience of care (FY14Q3 and later)	A higher value is better than a lower value
MH Popu Coverage	MH population coverage (FY14Q3 and later)	A higher value is better than a lower value
Oryx	Inpatient performance measure (ORYX)	A higher value is better than a lower value
PC Routine Care Appt	Timeliness in getting a PC routine care appointment (PCMH)	A higher value is better than a lower value
PC Urgent Care Appt	Timeliness in getting a PC urgent care appointment (PCMH)	A higher value is better than a lower value
PCMH Same Day Appt	Days waited for appointment when needed care right away (PCMH)	A higher value is better than a lower value
PCMH Survey Access	Timely Appointment, care and information (PCMH)	A higher value is better than a lower value
PC Wait Time	PC wait time for new patient completed appointments within 30 days of preferred date	A higher value is better than a lower value
PSI	Patient safety indicator (observed to expected ratio)	A lower value is better than a higher value
Rating Hospital	Overall rating of hospital stay (inpatient only)	A higher value is better than a lower value
Rating PC Provider	Rating of PC providers (PCMH)	A higher value is better than a lower value

Measure	Definition	Desired Direction
Rating SC Provider	Rating of specialty care providers (specialty care)	A higher value is better than a lower value
RN Turnover	Registered nurse turnover rate	A lower value is better than a higher value
RSMR-AMI	30-day risk standardized mortality rate for acute myocardial infarction	A lower value is better than a higher value
RSMR-CHF	30-day risk standardized mortality rate for congestive heart failure	A lower value is better than a higher value
RSMR-COPD	30-day risk standardized mortality rate for COPD	A lower value is better than a higher value
RSMR-Pneumonia	30-day risk standardized mortality rate for pneumonia	A lower value is better than a higher value
RSRR-AMI	30-day risk standardized readmission rate for acute myocardial infarction	A lower value is better than a higher value
RSRR-Cardio	30-day risk standardized readmission rate for cardiorespiratory patient cohort	A lower value is better than a higher value
RSRR-CHF	30-day risk standardized readmission rate for congestive heart failure	A lower value is better than a higher value
RSRR-COPD	30-day risk standardized readmission rate for COPD	A lower value is better than a higher value
RSRR-CV	30-day risk standardized readmission rate for cardiovascular patient cohort	A lower value is better than a higher value
RSRR-HWR	Hospital wide readmission	A lower value is better than a higher value
RSRR-Med	30-day risk standardized readmission rate for medicine patient cohort	A lower value is better than a higher value
RSRR-Neuro	30-day risk standardized readmission rate for neurology patient cohort	A lower value is better than a higher value
RSRR-Pneumonia	30-day risk standardized readmission rate for pneumonia	A lower value is better than a higher value
RSRR-Surg	30-day risk standardized readmission rate for surgery patient cohort	A lower value is better than a higher value
SC Routine Care Appt	Timeliness in getting a SC routine care appointment (Specialty Care)	A higher value is better than a lower value
SC Survey Access	Timely Appointment, care and information (Specialty Care)	A higher value is better than a lower value

Measure	Definition	Desired Direction
SC Urgent Care Appt	Timeliness in getting a SC urgent care appointment (Specialty Care)	A higher value is better than a lower value
SMR	Acute care in-hospital standardized mortality ratio	A lower value is better than a higher value
SMR30	Acute care 30-day standardized mortality ratio	A lower value is better than a higher value
Specialty Care Wait Time	Specialty care wait time for new patient completed appointments within 30 days of preferred date	A higher value is better than a lower value
Stress Discussed	Stress Discussed (PCMH Q40)	A higher value is better than a lower value

Appendix E: VISN Director Comments

Department of Veterans Affairs Memorandum

Date: March 26, 2018

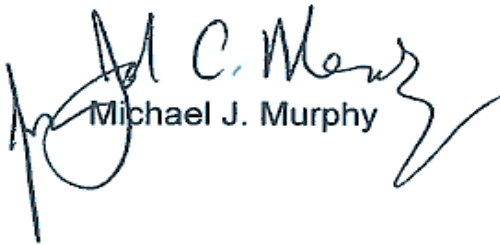

From: Director, Northwest Network (10N20)

Subj: CHIP Review of the VA Puget Sound Health Care System, Seattle, WA

To: Director, Los Angeles Office of Healthcare Inspections (54LA)

Director, Management Review Service (VHA 10E1D MRS Action)

1. Thank you for the opportunity to provide a status report on follow-up to the findings from the Comprehensive Healthcare Inspection Program (CHIP) review of the VA Puget Sound Health Care System, Seattle, WA.
2. Attached please find the facility concurrence and response to the findings from the review.
3. I concur with the findings, recommendations, and submitted action plans.

Michael J. Murphy

(Original signed by)

John Mendoza

Deputy VISN 20 Director

Appendix F: Facility Director Comments

Department of Veterans Affairs Memorandum

Date: March 22, 2018

From: Director, VA Puget Sound Health Care System (663/00)

Subj: CHIP Review of the VA Puget Sound Health Care System, Seattle, WA

To: Director, Northwest Network (10N20)

1. Thank you for the opportunity to review the report of the Office of Inspector General Healthcare CHIP inspection.
2. We concur with the findings and recommendations and will ensure that actions to correct them are completed as described.

Michael Tadych, FACHE
Director
